

PRESS RELEASE

April 11, 2008

VCA™ and Cla-Val Product Agreement

Colorado Springs, CO, USA –

Velcon Filters, Inc. of Colorado Springs, CO and Cla-Val of Costa Mesa, CA are pleased to announce a new product consisting of the Velcon Contaminant Analyzer (VCA™) integrated into a Cla-Val control valve. Velcon's VCA™ instrument analyzes fuels for the presence of water and solid contaminants. The new product has the ability to automatically shut off flow at the control valve when either the water or solid contaminant concentration increases over a preset threshold.

The VCA™ instrument is integrated into the outlet of the Cla-Val flow control valve body in order to facilitate installation and ease of use within an existing pipe or fuel line. The VCA™ has been extensively field tested, and the Cla-Val control valve is an industry standard. The combination of these two products will extend the versatility and custom ability of the VCA™ and give quality control and reliability to any type of fuel system.

The Velcon Contaminant Analyzer (VCA™) was developed in conjunction with Physical Sciences Inc. (PSI) which has supplied laser contaminant analyzers to the US Navy for monitoring fuel on aircraft carriers.

Velcon Filters, Inc. has been the leader in the fuel filtration industry for over 50 years. To upgrade your existing facilities, or to install new API/EI 1581 5th Edition equipment at your location, please contact Velcon at vfsales@velcon.com or contact your authorized Velcon distributor.
